

Add the Third Dimension with the ThermoJet Solid Object Printer

A superior method of communicating design intent. The ThermoJet Solid Object Printer communicates design intent in a way that a plotter, printer or screen display never will. Effectively communicate complex designs to project teams, other departments, customers, partners and vendors. Reduce costly delays that result from design errors uncovered late in the development cycle. Communicate concepts with the confidence only a ThermoJet model provides.

The ultimate CAD office peripheral. Place ThermoJet in a convenient office location, and connect it to your network for enterprise-wide access. With the click of a button, create 3-dimensional models directly from your desktop. ThermoJet produces superior quality models of any complexity in only hours.

Revolutionize your product development process. Communicate your designs more effectively. Quickly evaluate design alternatives. Deliver improved products to market. Reduce product development cycle time and costs. Gain the competitive edge—with the ThermoJet Solid Object Printer.

“ThermoJet allows CAD designers the freedom to quickly “print” and hold a 3-dimensional model in their hands. This is not virtual reality—this is physical reality, and the applications and opportunities go beyond one’s imagination.”

**— Dr. Richard Balanson
President and Chief Operating Officer,
3D Systems**

ThermoJet is an indispensable tool for:

Concept validation

Design intent communication

Customer and vendor feedback

Bid packages

3D faxes

Master patterns for casting
